

Permission to Security Control regarding criminal records

Information about security control

In accordance with the requirements in the Swedish regulation for security protection (SFS 2018:585), security control must be performed for persons who get unescorted access to a nuclear power plant or access to significant or vital information on important facilities, such as a nuclear power plant.

Security controls have the purpose to protect such installations against espionage, sabotage and terrorist attack. The control is based on references, interviews and checks in criminal records that no penalty marks occur in the criminal records.

During the period for work at the facility any new records that occur will be reported to the facility.

The management of security control is regulated by a particular procedure. Any information regarding security control is handled with secrecy. Welcome to contact the Security manager at Forsmarks Kraftgrupp AB, if you require more detailed information.

I have read and understood the information above and give the permission to that checks in criminal records will be done according the information as mentioned above.
